

# Concept of Higa Theory

Atomic conversion flow

EM (Rectifies electron energy)

becomes an atomic conversion material

Coherent (Quantum beat and energy supply)  
Rectifying force (Rectifies all forces and energy. Controls shock waves from typhoons, earthquakes, accidents, etc.)

Sea of entropy Polar (N and S, +and-)	Energy is in disorder Order is lost, thus unusable Nothing is faster than light	2D Hado (transverse wave) (Electromagnetic wave, radiation) Semiconductor / Rectified by diode	Molecules / <b>Harmful microorganisms</b> Process of death (Oxidation / Reduction)	<b>Irreversible</b>
<b>Continuous</b> Sea of Syntropy	Energy is rectified Ordered and usable	3D Hado (longitudinal wave) Carbon micro coil Carbon nanotube Rectification with fullerene, etc.	Atom Process of revival (Oxidation / Antioxidation)	<b>Reversible</b>
<b>Quantum unit Discontinuous</b> Quantum sea Position and motion (force) are measured simultaneously Impossible state No pole (mono ball) Everything is connected by quantum entanglement	Superconductivity, Meissner effect -272°C or less Information arrives faster than light	Multidimensional wave (Quantum energy) Because there is no resistance, it has an overlapping effect that reaches the end of the universe in an instant, enhancing coherence	<b>Homeopathic Super electric element</b> Elementary particles A state that can be anything (The world of thought, where there are both angels and demons) <b>Atomic conversion possible</b>	<b>Application to quantum computers and barriers</b>
<p>Characteristics of quantum state, all elements of matter are particles and waves overlapping, and the result of measurement is that particles are waves, both cannot be measured at the same time, but everything that exists is connected as a quantum bit.</p> <p>*The level of consciousness and love is the switch from the quantum sea to the gravity sea.</p>		<p>Topological and holographic, the individual is the whole and the whole is the individual. Embryonic / Stem cell DNA</p>		
Sea of gravity	Existence that gives energy to everything without excess or shortage (according to the will of the heavenly principle "omniscience and omnipotence"	<b>The earth is a sea of microorganisms and 90% of human bodies are microorganisms</b> Infinite dimensional wave Rule over all the powers of the universe Gravitational wave energy	Gravitational particles of the revival type of microorganisms are connected to gravitational waves in the universe by human consciousness, and gravitational wave energy functions	<b>Infinite</b>
<p>The whole picture is of natural (heaven) laws (omniscience and omnipotence). That is, a state that gives meaning to all being and phenomena, gives energy to their intentions, and compassion and nurtures them. Its power is determined by the level of love and consciousness. Human law is governed by the rules of winning and losing arising from scarcity, and it is structurally bound to perish.</p>		<p><b>Revival type</b></p>		

substance, real number, voltage (50,000V) (Power to send electrons)

antimatter, imaginary number, stay voltage (-50,000V) (Power to collect electrons)

Entanglement (quantum entanglement / connecting everything)  
(The existence of a certain heavenly principle "omnipotence")
